Filtering attachments by label in an attachments picker

Quick demo on how to apply "Field Definition Rule" on Attachment picker to **filter out** attachments that dont end with "xls" extension

Attachment picker works on Confluence objects "Attachments" - https://docs.atlassian.com/atlassian-confluence/5.8.6/com/atlassian/confluence/pages/Attachment.html

Which means, we can access ANY property of these objects - such as fileName (as in this example) or labels, via "labelling.label" (which means we call "getLabelling" then call "getLabel" on the underlying objects), or any other "get" method

Storage format for the demo

```
