

Render link to self

Creates a link to page itself

Online demo

[Render link to self](#)

With macro template contents as follows

```
## @noparams
<a href="$settingsManager.getGlobalSettings().getBaseUrl()${action.page.urlPath}" target="_blank">${action.page.displayTitle}</a>
```

With macro configuration

Macro Browser Information

Macro Name*

Macro names are converted to lower case

Visibility ☒ Visible to all users in the Macro Browser
☐ Visible only to system administrators in the Macro Browser

Macro Title*

Description

Categories

Administration
Communication
Confluence content
Development
External content

Icon URL

Absolute URL (e.g. <http://mysite.com/myimage.png>), or relative to the Confluence base URL (e.g. /images/logo/confluence_48_white.png)

Documentation URL

Definition of User Macro

Macro Body ☒ No macro body

Processing ☐ Escaped

☐ Unrendered

You should use this option for bodies that are processed within the template before being output. Ensure that HTML is ultimately output by the template.

☐ Rendered

The body will be rendered so most HTML entered will be passed to the template unmodified but Confluence specific mark up such as macro definitions will be rendered.

Template*

```
## @noparams
<a href="$settingsManager.getGlobalSettings().getBaseUrl()${action.page.urlPath}" target="_blank">${action.page.displayTitle}</a>
```
