

# Validation is reported twice - in header and for each field

How to setup a form to report validation errors additionally next to each field which failed the validation

Here is the form:

The screenshot shows a form with two input fields. The first field has the label "t \*" and the second field has the label "t1 \*". Both fields have a red asterisk indicating they are required. Below the fields is a "Save" button.

This behavior is managed through the parameter on ConfiForms Registrations Control

The screenshot shows the configuration dialog for the 'ConfiForms (Form View) Registrations Control' macro. On the left, there are several settings:

- CSS styles, separated by semicolon**: An empty text input field.
- Applied on 'Registration' button when Dialog mode is on**: An empty text input field.
- Visible only to groups/users**: An empty text input field.
- Comma-separated list of group names/usernames this field is visible to. Leave blank if there are no restrictions**: An empty text input field.
- Hide control when stored data matches this criteria**: An empty text input field.
- Same syntax expected as in filters**: A link to documentation.
- Errors will be reported also with a message shown next to the field**: A checkbox with a blue circle around it, indicating it is checked.

On the right, the **Preview** section shows a preview of the form. It displays two input fields with validation errors: "t \*" and "t1 \*". A green box highlights the preview area with the text "Visible only in PREVIEW". Below the preview, there is a "Show" link.

At the bottom of the dialog, there are "Select macro", "Save", and "Cancel" buttons.

Which results in this behavior

**!**

- 't' is required to be set
- 't1' is required to be set

t \*

t1 \*

Here is the storage format for the configuration

```
