How to enable debug logging for ConfiForms app

In 3 simple steps

1. Go to Confluence administration and find menu item "Logging and Profiling". The direct link would be something like https://YOURSERVER/admin/viewlog4j.action
2. Add the following entry

```
com.vertuna
```

3. ConfiForms is using the same log used by your Confluence. ConfiForms log entries are from `com.vertuna.confluence.plugins.confiforms.util.ConfiLogger`
