

Merge forms with different structure

Merging forms with different structure is very complex area, and really out of the scope of the functionality provided by ConfiForms TableViewMerger, but here is what could be done...

Register

Register

Data in form f1

text field will be used as key	myfield1
test	2
another	2
TEST MMM	23
112233	5
ewqfwef	12
4	4
test	24
another field	22

Merging together, text field (same name) is as the grouping key

Merged column is configured like this
Merged: (ZEROIFEMPTY("[entry.myfield2]") + ZEROIFEMPTY("[entry.myfield1]"))

text field will be used as key	Merged
test	4430
another	2
