

# Building a dropdown field in ConfiForms backed by webservice call to Jira Rest API - createmeta

In this tutorial we show how to fill in the dropdown field with values for priorities (priority field in JIRA project)

The underlying request is as follows

<https://vertuna-test.atlassian.net/rest/api/latest/issue/createmeta?expand=projects.issueTypes.fields&projectKeys=JTEST>

With response given with the following structure:

```
{
  expand: "projects",
  projects: [
    {
      expand: "issuetypes",
      self: "https://vertuna-test.atlassian.net/rest/api/2/project/10000",
      id: "10000",
      key: "JTEST",
      name: "JTEST",
      avatarUrls: {
        48x48: "https://vertuna-test.atlassian.net/secure/projectavatar?pid=10000&avatarId=10546",
        24x24: "https://vertuna-test.atlassian.net/secure/projectavatar?size=small&pid=10000&avatarId=10546",
        16x16: "https://vertuna-test.atlassian.net/secure/projectavatar?size=xsmall&pid=10000&avatarId=10546",
        32x32: "https://vertuna-test.atlassian.net/secure/projectavatar?size=medium&pid=10000&avatarId=10546"
      },
      issuetypes: [

```

## Save

It is important to understand the structure of the response in order to understand how the dropdown field is built / mapped

Source code for the form

```
<ac:structured-macro ac:macro-id="45065969-9928-4af4-8926-cd18076a7db9" ac:name="conform" ac:schema-version="1">
  <ac:parameter ac:name="formName">f1</ac:parameter>
  <ac:rich-text-body>
    <ac:structured-macro ac:macro-id="972e30b8-5709-454c-a3d6-e93bc5f6e7eb" ac:name="conform-entry-register" ac:schema-version="1">

</p>
</ac:rich-text-body>
</ac:structured-macro>
```

So, we take the response, and go through projects, selecting 2nd element from the array, then take issuetypes field and get the 1st element, then going down the tree to "fields", then finding "priority" field and it's "allowedValues"

```
projects[1].issuetypes[0].fields.priority.allowedValues
```

If you are using latest createmeta APIs from **Jira 9**

```
GET /rest/api/2/issue/createmeta/{projectIdOrKey}/issuetypes/{issueTypeId}
```

The root to use parameter value will be a bit different. An expression would look like this (to get values for the priority field)

```
values.(fieldId=priority).allowedValues
```

Mappings for the ID and LABEL (parameters) will be the same: id and name

Our web service connection to set to "https://vertuna-test.atlassian.net"
