

Getting Jira issue details with IFTTT macro

This is a demo to illustrate how you can query and save to ConfiForms issue details from JIRA with ConfiForms IFTTT (Normally, you will do it with ConfiForms Field Definition Rules and populate Issue details on the form...)

We use webservice connection and Jira REST APIs to get details of a JIRA issue

Same concept can be used with IFTTT that uses Applink service

Issue key

Type issue key so we will do a lookup with IFTTT

Issue summary

Save

Issue keys and summaries (set with IFTTT macro when record is created)

Issue key	Issue summary
JTEST-10	As a developer, I can update story and task status with drag and drop (click the triangle at far left of this story to show sub-tasks)
