# Tutorials from ConfiDoc website and short tutorial how to use ConfiDoc excerpt and ConfiDoc excerpt anchor macros
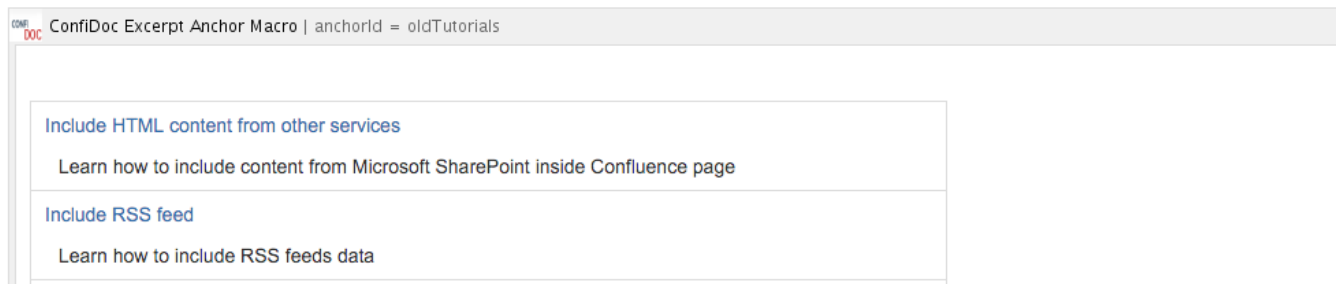

This page itself uses ConfiDoc Excerpt macro to show the content from Tutorials page

Here is the list of tutorials (Live demo) Scroll down to see how it is configured

---

Here is how this is configured:

On the Tutorials page we have a ConfiDoc Anchor macro around our tutorials list

So we have an anchor called "oldTutorials". And we specify it as a CSS3 like parameter to ConfiDoc Excerpt macro (which we have placed on to this page)

Insert 'ConfiDoc Excerpt Macro' Macro

1212635

Services are defined by Confluence administrators through ConfiDoc plugin configuration UI

Include as *

Text

Content type

CSS3-like Selector (html excerpts)

div id="oldTutorials"

To include parts of the resource's content.
Example: div id="myId" or div/class

Custom CSS styles to apply on rendered element

Preview

Include HTML content from other services

Learn how to include content from Microsoft SharePoint inside Confluence page

Include RSS feed

Select macro   Insert   Cancel

And the result you can see on the top of the page.

You can include multiple excerpts, include it multiple times and the way you want/need. In most cases you will not even need to set an anchor macro on original page as ConfiDoc excerpt macro can work with raw HTML and select the content directly from the page. You will need just to make sure the content block is identifiable and can be selected with CSS3 like selector syntax
