

# using apply filter on dependent smart dropdowns

Items in form **f1choices**

| My choice                       | color |
|---------------------------------|-------|
| First choice - only reds        | Red   |
| Second choice - only green ones | Green |

Items in form **f2choices**

| My choice  | color |
|------------|-------|
| Apple      | Green |
| Apple      | Red   |
| Pear       | Green |
| Banana     | Green |
| Watermelon | Red   |

Form to use the choices and filter...

We filter the second dropdown by color of the item selected in the first dropdown

This is what it looks like in the Confluence editor

Your browser does not support the HTML5 video element

Storage format for the demo
