

How to get UUID or record internal id in ConfiForms

Each and every record in ConfiForms has set of metadata fields that are there automatically and managed for you by ConfiForms

From [Documentation](#)

- *id* - record internal id (UUID), unique for every saved record within dataset
- *ownedBy* - the username(s) of the users who own the record (and can fully control it) - multi-value field! Multiple users can own a record!
- ~~*ownedByName* - the full name of the user who owns the record~~ Use *ownedBy.transform(fullName).asList*
- *createdBy* - the username of the user who has created the record (admin users can create records for other users)
- ~~*createdByName* - the full name of the user who has created the record~~ Use *createdBy.fullName*
- *created* - the timestamp when the record was created
- *dateCreatedFormatted* - a more readable way to see created timestamp (Uses "yyyy-MM-dd HH:mm" format, if you need "created" date in another format, use [Virtual functions](#), *created.formatDate(PATTERN)* to get it in the format you want)
- *recordId* - numeric ID of the record, *unique* within the form. If you want to reference the record always use "id" field instead

These fields could be queries the same way as you do with other, user defined fields.

To access and id (or UUID of the record) you can use the following methods

Using [entry.field_name] notation

```
[entry.id]
```

Or by Using ConfiForms Field macro, setting "Field name" parameter as follows

Insert 'ConfiForms Form Field' Macro

Field macro for ConfiForms dynamic forms. Use it with views or registration control [Documentation](#)

Field name *

Name of the field defined in the form (can be with '[virtual functions](#)') or expression ([supported expressions](#)) when used in TableView Merger macro

☐ Show with label

Label from ConfiForms Field Definition will be added as text before the field value

Override label name to use for this field

When left empty the Field Definition label will be used
