

# Create Jira issue with webservice connection with files and remote links

Yes, you can create Jira issue with Webservice IFTTT action (usual IFTTT to create Jira issues will not work for anonymous users as it does uses the Application link to connect to your Jira and that will not be available for anonymous users, while web service connection is available to anyone, unless you tell otherwise (setting up connection restrictions))

Here is the demo (creates the issue and stores the Jira key back)

Source code for the solution

note that you need to configure webservice connection to something like this

### WS Connection Configuration

Name:   
The name for your configuration, will be visible to users

WS URL:   
Enter with protocol (http:// or https://). This URL will be combined together with the service URL you setup. For WS-backed fields in ConfiForms you service must accept GET requests and return JSON as a result

Username:   
Leave empty, if the connection requires **no authentication**

Password:

---

Restrictions:   
Comma separated user groups and/or users who should have access to this configuration. Blank, means no restrictions - everyone can use it

The table is created like this

```
<ac:structured-macro ac:macro-id="d309c641-56ef-46cb-b01f-19590d41605e" ac:name="confiform-table" ac:schema-version="1">
  <ac:parameter ac:name="formName">ji</ac:parameter>
  <ac:rich-text-body>
    <p>
      <ac:structured-macro ac:macro-id="bb4766d6-cbfe-40c6-ace4-f3dcd21dcc99" ac:name="confiform-field" ac:schema-version="1">
        <ac:parameter ac:name="fieldName">jk.asJSON.key</ac:parameter>
      </ac:structured-macro>
    </p>
    <p>
      <ac:structured-macro ac:macro-id="18b7e9fe-30c3-4a04-886e-6a47446af441" ac:name="confiform-field" ac:schema-version="1">
        <ac:parameter ac:name="fieldName">created</ac:parameter>
      </ac:structured-macro>
    </p>
  </ac:rich-text-body>
</ac:structured-macro>
```

Using asJSON function as a bridge ([Virtual functions](#)) and accessing the issue key (key property)

```
jk.asJSON.key
```

- [Create Jira issue with webservice connection with files and remote links - storage format](#)
