

# The format for Date and Datetime picker is weird

This is something we hear occasionally from our customers.

Basically the answer is simple: **ConfiForms uses the global format configured in your Confluence installation for date and date time.**

We worked hard to make Date and Datetime pickers to be as localised as possible and to match the formatting and localization settings you have configured.

The global settings for Date and Datetime could be configured through **General configuration** menu item in Confluence administration

## Formatting and International Settings

[Edit](#)

You can change the default language for the Confluence interface on the [language configuration page](#) These options relate to the time and date formatting on the site. Unless you are sure of what you are doing, we recommend that you leave these as they are.

|                       |                    |
|-----------------------|--------------------|
| Indexing Language     | English            |
| Encoding              | UTF-8              |
| Time Format           | h:mm a             |
| Date Time Format      | MMM dd, yyyy HH:mm |
| Date Format           | MMM dd, yyyy       |
| Long Number Format    | #####              |
| Decimal Number Format | #####.#####        |
