

Using ConfiForms Rule for Field Definition to calculate the sums online

Using ConfiForms Rule and the formula like

```
total=([entry.p.transform(price).join(+)])
```

to calculate the sum for the order

See more about transform function on [Virtual functions](#) page

Rows in prices form

product	price
banana	12
apple	10
orange	8

Try checking the "p" field - the amount is recalculated.

"p" is the smart field taking values from "prices" form

The screenshot shows a user interface for a 'prices' form. On the left, there is a list of items with their names: banana, apple, and orange. To the right of the list is a field labeled 'total' with a grey rectangular input box. At the bottom of the screen, there is a large grey button labeled 'Save'.

Storage format for calculation rule

```
