

# Designing a quiz with ConfiForms

We have 2 forms, one form with quiz questions and answers and another form that uses the data from form 1 and allows users to write their own answers, to answer the quiz

## Register

Answer field is set to be restricted (view) only to users from confluence-administrators security group

Quiz for user:

Quiz question	Which came first the Model A or T?
My answer	Model A
Quiz question	Most popular Fiat model
My answer	Fiat 500

This is the UI visible by quiz admin (with answers) Correct answer is taken from "quiz" form using smart field reference (quiz.answer)

Quiz question	My answer	Correct answer
Which came first the Model A or T?	Model A	
Most popular Fiat model	Fiat 500	

So, basically the idea is that you create 2 forms - one with a quiz and another one with answers that you r users will record

And connect the forms via the Smart fields

We have 2 forms, one form with quiz questions and answers and another form that uses the data from form 1 and allows users to write their own answers, to answer the quiz

ConfiForms Form Definition | formName = quiz

ConfiForms (FormView) Registrations Control

ConfiForms Field Definition | fieldName = question | fiel...

ConfiForms Field Definition | fieldName = answer | fieldL...

Answer field is set to be restricted (view) only to users from confluence-administrators security group

ConfiForms Form Definition | formName = answers

ConfiForms (FormView) Registrations Control | restrictions = sash

ConfiForms Field Definition | fieldName = quiz | fieldLab...

ConfiForms Field Definition | fieldName = myanswer | fiel...
