ConfiForms app for creating forms in Confluence

ConfiForms allows you easily to **create custom data web forms** for your business needs in Confluence.

ConfiForms is highly customizable and requires no programming skills to get the simple setups done. For complex setups it does require a bit of technical knowledge, but this opens millions of configurations and integrations options to you.

ConfiForms is used by over **2500+** companies and individuals around the world.

ConfiForms is actively developed and supported by Vertuna LLC.

Key features

Custom data entry forms
You can quickly build customized data entry forms for various business needs with no programming skills. ConfiForms provides over 30 field types to choose from and these can be Modal or embedded, simple or complex. You can even design custom layouts!

A flexible way to see your stored data
Your business data can be viewed in tables, as lists, as cards or in combinations. Data can be merged and aggregated, and views can be customized with CSS as needed.

Filters, Ordering and Sorting
In addition to sorting and organizing your data, you can also display subsets of stored data for designated user groups.

Audit and Control
ConfiForms tracks changes for your stored data in form-specific ChangeLogs and provides a powerful Admininstrative Interface to manage that data. Data cab be easily exported in JSON, XML, Excel or CSV formats for future use and analysis.

Secure and safe
ConfiForms is completely integrated with the Confluence security system, using its permissions and access restrictions. You control who can access and edit your ConfiForms data, with fine-grained control for each form field when you need it.

REST, Import and Migration API
ConfiForms offers an extensive REST API to support integration with other systems. In addition, ConfiForms includes a Migration API when you want to transfer data as-is from one Confluence server to another, and an Import API to bring external data into a ConfiForms database using the CSV format.

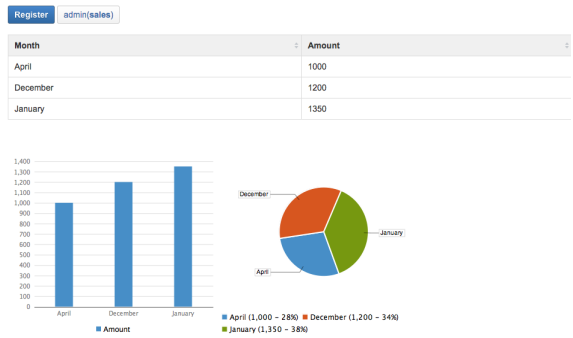

Customer driven development
We listen to our customers. We use your feature requests to improve the ConfiForms plugin.

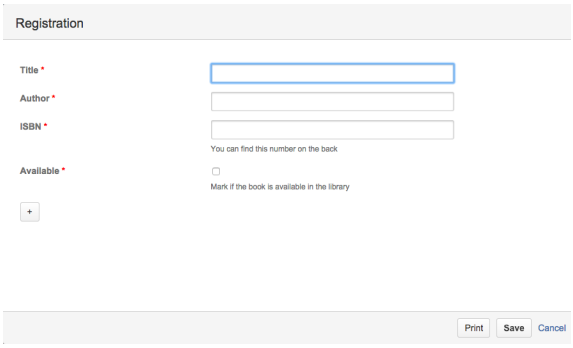

Integration with Confluence workflows
ConfiForms is not only about forms and data, but also integrates smoothly with Confluence workflows and notifications. Our IFTTT macro makes it easy to create your own workflows and even to build small web applications within Confluence.
