

How to configure ConfiForms fields with conditional validation rules

i In this tutorial you will learn how to create a form with ConfiForms which will have:

- fields with custom validation rules based on the selected value in other field

We will validate the value as number when "Numbers only" is selected and we will validate the same field's value to contain "letters only" when "Letters only" is selected in the dropdown

! If you are new to ConfiForms, please take a few minutes to read the [Basic concepts](#) Guide, or go through the video tutorial on that page. 😊

This is how the form looks like:

The screenshot shows a configuration interface for a 'Registration' form. On the left, there are two fields: 'Type' and 'Value'. Below 'Type' is a '+' button. A dropdown menu is open over the 'Value' field, showing two options: 'Numbers only' and 'Letters only'. The 'Numbers only' option is selected. At the bottom right of the interface are 'Save' and 'Close' buttons.

Complete solution in storage format

```

<ac:structured-macro ac:macro-id="edbecdec-64c6-4b39-bbbf-23952a70ec23" ac:name="confiform" ac:schema-version="1">
    <ac:parameter ac:name="formName">f</ac:parameter>
    <ac:rich-text-body>
        <p>
            <ac:structured-macro ac:macro-id="2ee38079-27b7-4edb-a7cc-6613c23af6f0" ac:name="confiform-field-definition"
                ac:schema-version="1">
                <ac:parameter ac:name="fieldName">type</ac:parameter>
                <ac:parameter ac:name="fieldLabel">Type</ac:parameter>
                <ac:parameter ac:name="values">false[numbers=Numbers only|letters=Letters only|]</ac:parameter>
                <ac:parameter ac:name="type">select</ac:parameter>
            </ac:structured-macro>
        </p>
        <p>

                <ac:parameter ac:name="fieldName">Please enter numeric value</ac:parameter>
                <ac:parameter ac:name="values">^[-0-9,;]+\$</ac:parameter>
                <ac:parameter ac:name="action">Validation rule</ac:parameter>
                <ac:parameter ac:name="actionFieldName">val</ac:parameter>
            </ac:structured-macro>
        </p>
        <p>
            <ac:structured-macro ac:macro-id="1ced7eda-f1e8-484b-af45-c15922005685" ac:name="confiform-field-definition-rules"
                ac:schema-version="1">
                <ac:parameter ac:name="condition">type:letters</ac:parameter>
                <ac:parameter ac:name="fieldName">Only letters are allowed</ac:parameter>
                <ac:parameter ac:name="values">^[a-zA-Z]*\$</ac:parameter>
                <ac:parameter ac:name="action">Validation rule</ac:parameter>
                <ac:parameter ac:name="actionFieldName">val</ac:parameter>
            </ac:structured-macro>
        </p>
    </ac:rich-text-body>
</ac:structured-macro>

```

Pieces of a puzzle (how it looks like in the Confluence editor)

CONF: ConfiForms Form | formName = f

CONF: ConfiForms Field Definition | fieldName = type | fieldLab...

CONF: ConfiForms Field Definition | fieldName = val | fieldLabe...

CONF: ConfiForms Registration Control

CONF: ConfiForms Field Definition Rules | actionFieldName = val | con...

CONF: ConfiForms Field Definition Rules | actionFieldName = val | con...

We have simple form (ConfiForms Form), 2 fields (2 ConfiForms Field definitions), 1 ConfiForms Registration Control and 2 ConfiForms Field Definition Rules macros

Let's see in more details how the "type" field is configured:

Edit 'ConfiForms Field Definition' Macro

<p>type</p> <p>Must be unique within the form defined and alphanumeric</p> <p>Field label *</p> <input type="text" value="Type"/> <p>Field type</p> <p>Dropdown</p> <p><input type="checkbox"/> Track changes</p> <p>Sorting</p> <p><input type="text"/></p> <table border="1" style="margin-top: 10px;"> <thead> <tr> <th>id</th> <th>value</th> </tr> </thead> <tbody> <tr> <td>Numbers</td> <td>Letters</td> </tr> </tbody> </table> <p>Select macro</p>	id	value	Numbers	Letters	<p>Preview</p>
id	value				
Numbers	Letters				
<input type="button" value="Save"/> <input type="button" value="Cancel"/>					

It is a dropdown field with 2 choices: numbers (Numbers only) and letters (Letters only)

Next important bit is 2 ConfiForms Field Definition Rules macros and their configurations. Both rules are set to track "val" field and executed based on a condition, meaning based on the selection made in the "type" field. Important bit here is the condition - we filter based on this condition and use an ID for dropdown field (see configuration for "type" field above)

Edit 'ConfiForms Field Definition Rules' Macro

<p>val</p> <p>Name of the field you want to track/validate</p> <p>Condition</p> <p>type:numbers</p> <p>Action will be executed when condition is met. Same syntax as in filters The scope is current entry/record</p> <p>Action *</p> <p>Validation rule</p> <p>Action to perform</p> <p>Message to show when validation fails</p> <p>Please enter numeric value</p> <p>Validation rule</p> <p><code>^[0-9,;]+\$</code></p>	<p>Preview</p>
<p>Select macro</p>	<p>Save Cancel</p>

Edit 'ConfiForms Field Definition Rules' Macro

<p>val</p> <p>Name of the field you want to track/validate</p> <p>Condition</p> <p>type:letters</p> <p>Action will be executed when condition is met. Same syntax as in filters The scope is current entry/record</p> <p>Action *</p> <p>Validation rule</p> <p>Action to perform</p> <p>Message to show when validation fails</p> <p>Only letters are allowed</p> <p>Validation rule</p> <p><code>^[a-zA-Z]*\$</code></p>	<p>Preview</p>
<p>Select macro</p>	<p>Save Cancel</p>

And here is how the form behaves when validation fails

Registration

- Please enter numeric value

Type

Numbers only

Value

hello

[Save](#) [Close](#)

Registration

- Only letters are allowed

Type

Letters only

Value

12345

[Save](#) [Close](#)

When validation is successful the record is saved into the form storage, otherwise the appropriate error message is shown
