# ConfiForms app detailed view over the plugin macros

This diagram shows you how and where to use ConfiForms macros. Which macros shall be used together and which should not

For detailed tutorials demonstrating various areas of the plugin please have a look at our Tutorials page

---

FORM and FIELDS definition
validation and form behaviour configuration
event handler configuration

ConfiForms Form definition

1 .. n	ConfiForms Field definition
0 .. n	ConfiForms Field Definition Rules
0 .. n	ConfiForms IFTTT Integration Rules

FORM and FIELDS configuration
for data entering and filtering

ConfiForms Registration Control (Form View)

0 .. n	ConfiForms Field

ConfiForms Form Filter Control

0 .. n	ConfiForms Field

* must be used with some **view** macro to filter stored data in that view

---

FORM view and FIELDS view configuration
for displaying/modifying/filtering/sorting
of stored data

ConfiForms TableView

0 .. 1	ConfiForms Edit Controls
0 .. 1	ConfiForms Entry Viewer
0 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields

ConfiForms CalendarView

0 .. 1	ConfiForms Edit Controls
0 .. 1	ConfiForms Entry Viewer
0 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields

ConfiForms ListView

0 ..1	ConfiForms Edit Controls
0 ..1	ConfiForms Entry Viewer
1 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields
0 .. n	ConfiForms IFMatches Helper

ConfiForms CleanView

0 .. 1	ConfiForms Edit Controls
0 .. 1	ConfiForms Entry Viewer
1 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields
0 .. n	ConfiForms IFMatches Helper

ConfiForms CardView

0 .. 1	ConfiForms Edit Controls
0 .. 1	ConfiForms Entry Viewer
0 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields

ConfiForms ValueView

* allows you to show a particular field's value. you can make it editable if necessary

ConfiForms PlainView

* build your own HTML to represent a ConfiForms record and access field values via [entry.field_name] notations

ConfiForms TableView Merger

0 ..1	ConfiForms Edit Controls
0 ..1	ConfiForms Entry Viewer
1 .. n	ConfiForms Field
0 .. n	CSS Rules for ConfiForms Fields

ConfiFormsTableView Merger macro has **2 modes**: to **merge** the data from different forms and to **aggregate** the data (with calculations).

When the data is aggregated it cannot be edited and **ConfiForms Edit Controls** cannot be used. When you aggregate the data from different forms the **ConfiForms Entry Viewer** macro shall not be used as well.

* allows you to query and aggregate stored data from one or different forms
