

How to use page properties and ConfiForms together

This is a quick demo on how you can use Page properties and ConfiForms macros together

So, we have a simple form with just 2 fields, one text field and another one is a page/blogpost field

The screenshot shows the ConfiForms Form Definition interface. It consists of three stacked sections:

- ConfiForms (Form View) Registrations Control | restrictions = confluence**: This section contains a single input field.
- ConfiForms Form Field Definition | fieldName = testField | fie...**: This section contains a single input field.
- ConfiForms Form Field Definition | fieldName = page | fieldLab...**: This section contains a single input field.

For this field we will lookup it's page properties

For the demo, we have created a record that points at this page and we will get the value of "test field" page property

Page properties is actually defined using ValueView macro

The screenshot shows the Page properties interface. It displays two rows of properties:

| | |
|--------------|--|
| test field | ConfiForms ValueView formName = demoForm field... |
| static field | This is a text in a static field in page property |

| | |
|--------------|---|
| test field | testing |
| static field | This is a text in a static field in page property |

Reporting using page properties report

The screenshot shows the Page properties report interface. It displays a single row of data:

| | | |
|-------|--------------|------------|
| Title | static field | test field |
|-------|--------------|------------|

Page properties report configuration

```
<ac:structured-macro ac:macro-id="2ff8264b-553e-40cb-84ea-534ed310329d" ac:name="detailssummary" ac:schema-version="2">
    <ac:parameter ac:name="cql">label = "pp" and space = currentSpace()</ac:parameter>
</ac:structured-macro>
```

Show data from ConfiForms and page properties using ConfiForms TableView

| testField | Page | page property "test field" value | page property "test field" value |
|-----------|---|----------------------------------|---|
| testing | CONFIFORMS : How to use page properties and ConfiForms together | testing | This is a text in a static field in page property |

| testField | Page | page property "test field" value | page property "test field" value |
|-----------|---|----------------------------------|---|
| testing | CONFIFORMS : How to use page properties and ConfiForms together | testing | This is a text in a static field in page property |

Storage format for the TableView:

```
<ac:structured-macro ac:macro-id="d6389b22-191b-4aa2-a1c5-7c7a02e550b7" ac:name="confiform-table" ac:schema-version="1">
    <ac:parameter ac:name="formName">demoForm</ac:parameter>
    <ac:rich-text-body>
        <p>
            <ac:structured-macro ac:macro-id="ea84b9c6-e3d1-4a97-8f13-5fb7c4cf64ff" ac:name="confiform-field" ac:schema-version="1">
                <ac:parameter ac:name="fieldName">testField</ac:parameter>
            </ac:structured-macro> <ac:structured-macro ac:macro-id="8b528074-606c-49ce-80a9-24c3689a3f02" ac:name="confiform-field" ac:schema-version="1">
                <ac:parameter ac:name="fieldName">page</ac:parameter>
            </ac:structured-macro>
            <ac:structured-macro ac:macro-id="803ffffd-481a-4f4e-910a-51231598254c" ac:name="confiform-field" ac:schema-version="1">
                <ac:parameter ac:name="overrideLabel">page property "test field" value</ac:parameter>
                <ac:parameter ac:name="fieldName">page.pageProperties(test field)</ac:parameter>
            </ac:structured-macro>
        </p>
        <p>
            <ac:structured-macro ac:macro-id="a2e2514b-3a60-4bb9-97e8-f44685f7b00a" ac:name="confiform-field" ac:schema-version="1">
                <ac:parameter ac:name="overrideLabel">page property "test field" value</ac:parameter>
                <ac:parameter ac:name="fieldName">page.pageProperties(static field)</ac:parameter>
            </ac:structured-macro>
        </p>
    </ac:rich-text-body>
</ac:structured-macro>
```
