

# ConfiForms with autopage field to track the source

This is a demo to demonstrate how "Autopage" field works in ConfiForms

The idea of this field is to track the source **where the record has been added**

## Register

Form with 2 fields:

- "tf" of type text
- "pageSource" of type autopage

Show all the records (also, the source where it has been added, and also, just the space key. Autopage is a reference to page and any property of the page object could be accessed. See more on [Accessing field values and properties](#))
