ConfiForms MatrixView and what it does

Since Release Notes#Version2.15.2 ConfiForms offers new "view" macro, called MatrixView

This macro allows you to create easily filterable views over your form's data grouped by the desired field

Let's consider the following form

Just 2 fields: field1 and info

And we want to "group information" by "field1"

We can use MatrixView to help us here

Here is how this looks like in real time. Users can filter data in the view just by clicking on the labels shown on the left
