

How to style the email messages you send with ConfiForms

With ConfiForms you can easily send out email messages. Messages can be sent conditionally, and recipients can be looked up dynamically as well as the message contents.

Use inline styles instead

With ConfiForms version 2.18.1 ([Release Notes#Version2.18.1](#)) you can use the following option that has better compatibility with email clients (as very few email clients really support CSS from external sources as shown in this page on the left)

Insert 'ConfiForms IFTTT Integration Rules' Me

- ☐ Use Confluence mail queue
- When checked, Confluence email queue will be used for sending the emails asynchronously, otherwise the emails are sent right away
- ☒ Include Confluence CSS styles
- When unchecked, the email contents is sent as is, without any extra styles included. Email format is always HTML

Preview

However, by default, ConfiForms does not include any extra styles for the messages you configure and the message is sent with a default style for the HTML

Adding standard Confluence styles be done by including the CSS from [Atlassian CDN](#) right in the message body (of course, you can add your own CSS rules if/when necessary to be included in the result message)

Here is a visual example

Update

AUI CDN is not working anymore - see <https://community.developer.atlassian.com/t/aui-cdn-homepage-not-loading/37412>
