

# Using TableView merger to find duplicate records

SINCE VERSION 1.36

Consider having a requirement to find duplicate records in the ConfiForms dataset.

Below you can see the approach to use to complete the task.

For clarity we will have a simple form with just 2 fields

Field "myname" of type text and the field "mark" - a dropdown with choices from 0 to 5

```
<ac:structured-macro ac:macro-id="d15cdea6-43a1-4555-aald-ee3879e2bdbe" ac:name="confiform" ac:schema-version="1">
  <ac:parameter ac:name="formName">f</ac:parameter>
  <ac:rich-text-body>
    <ac:structured-macro ac:macro-id="bad2c384-a4ab-47ce-9207-28ee30111017" ac:name="confiform-entry-register" ac:schema-version="1">
      <ac:rich-text-body>
        <p>&nbsp;</p>
      </ac:rich-text-body>
    </ac:structured-macro>
    <p>
      <ac:structured-macro ac:macro-id="8b34ab65-e56a-4550-89a8-99d0278e4952" ac:name="confiform-field-definition" ac:schema-version="1">
        <ac:parameter ac:name="fieldName">myname</ac:parameter>
        <ac:parameter ac:name="fieldLabel">The name</ac:parameter>
        <ac:parameter ac:name="type">text</ac:parameter>
      </ac:structured-macro>
    </p>
    <p>
      <ac:structured-macro ac:macro-id="45dd0575-4e4f-4f03-9757-4ef10d301aa8" ac:name="confiform-field-definition" ac:schema-version="1">
        <ac:parameter ac:name="fieldName">mark</ac:parameter>
        <ac:parameter ac:name="fieldLabel">Mark</ac:parameter>
        <ac:parameter ac:name="values">false[0=0|1=1|2=2|3=3|4=4|5=5|]</ac:parameter>
        <ac:parameter ac:name="type">select</ac:parameter>
      </ac:structured-macro>
    </p>
  </ac:rich-text-body>
</ac:structured-macro>
```

Here is how to show ONLY those "marks" which are registered more than once

The screenshot shows a ConfiForms interface with a 'TableView Merger' macro. It has three main sections:

- ConfiForms Form Field | fieldName = mark**: A single item under this heading.
- ConfiForms Form Field | fieldName = Count:([count])**: A single item under this heading.
- ConfiForms TableView | formName = f**: An empty table view section.

We use TableView Merger macro, and put "mark" field as a grouping field and define a "Count" field with [count] expression

Defining an expression as "Count:([count])" will create a virtual field name "Count" which will hold the number of records in this "group"

We can use this field in a filter, to show only those marks which were registered more than once

```
Count:>1
```

Storage format for the TVM can be found below

```
<ac:structured-macro ac:macro-id="84c1980f-dd9e-4d96-aacb-52003156a435" ac:name="confiform-table-merger"
    ac:schema-version="1">
<ac:parameter ac:name="filter">Count:>1</ac:parameter>
<ac:rich-text-body>
<p>
    <ac:structured-macro ac:macro-id="8c841340-1033-4a46-8c4e-abf5bd9579ae" ac:name="confiform-field"
        ac:schema-version="1">
        <ac:parameter ac:name="fieldName">mark</ac:parameter>
    </ac:structured-macro>
</p>
<p>
    <ac:structured-macro ac:macro-id="c2ff76c3-ba6b-42c2-bde0-b5a7d1a72c3b" ac:name="confiform-field"
        ac:schema-version="1">
        <ac:parameter ac:name="fieldName">Count:([count])</ac:parameter>
    </ac:structured-macro>
</p>
<ac:structured-macro ac:macro-id="e6e68c3a-67ea-45a2-8fda-e996c94ae900" ac:name="confiform-table"
    ac:schema-version="1">
    <ac:parameter ac:name="formName">f</ac:parameter>
    <ac:rich-text-body>
        <p>&nbsp;</p>
    </ac:rich-text-body>
</ac:structured-macro>
</ac:rich-text-body>
</ac:structured-macro>
```
